

1 TARGET KEYWORDS

PRIMARY KEYWORDS

precision manufacturing components custom machined parts

LONG-TAIL KEYWORDS

custom X-Y rail systems manufacturer precision gear manufacturing services CNC machined cam components industrial linear motion systems custom precision components supplier high-precision gear cutting services mechanical cam design and manufacturing OEM precision parts manufacturer tight-tolerance CNC milling services custom linear guide rail assemblies

2 ON-PAGE SEO

Title Tag Template

[Product] | PrecisionWorks Manufacturing — Precision Engineered Components

Heading Hierarchy

H1: One per page — product/service name. H2: Feature categories (Specifications, Applications, Materials). H3: Individual specs or sub-features. Keep H1 under 60 characters; include primary keyword naturally.

PAGE	META DESCRIPTION (≤155 CHARS)	ALT TEXT EXAMPLE
X-Y Rail Systems	High-precision X-Y rail systems engineered for industrial automation. Custom stroke lengths, tight tolerances & fast lead times from PrecisionWorks.	PrecisionWorks X-Y linear rail system with hardened steel guides mounted on CNC base plate
Gears	Custom spur, helical & bevel gears manufactured to AGMA standards. Precision gear cutting in steel, brass & engineered plastics. Request a quote today.	Close-up of precision-cut helical gear showing tooth profile and surface finish
Cams	Precision cam components for high-speed machinery — CNC machined profiles with ±0.001" tolerances. Design assistance & prototyping available.	CNC-machined steel cam component with polished lobe surface for high-speed actuator
Custom Components	OEM precision components machined to your specifications. Multi-axis CNC milling & turning, from prototype to production. ISO 9001 certified facility.	Array of custom CNC-machined precision components in aluminum and stainless steel

3 TECHNICAL SEO

Core Web Vitals

- > LCP < 2.5 s — optimize hero images (WebP, lazy-load below fold)
- > FID < 100 ms — defer non-critical JS, minimize main-thread work
- > CLS < 0.1 — set explicit width/height on all media elements

Crawlability & Indexing

- > XML sitemap at /sitemap.xml — auto-update on publish
- > robots.txt — allow all product pages, block /admin, /staging
- > Canonical tags on every page to prevent duplicate content
- > Self-referencing canonicals on paginated catalog pages

Structured Data

- > Organization schema — name, logo, contact, social profiles
- > Product schema on each product page — name, description, image, SKU, brand
- > LocalBusiness schema — address, geo-coordinates, hours
- > FAQPage schema on pillar pages for rich snippets

Performance & Security

- > HTTPS site-wide with HSTS header enabled
- > Mobile-first responsive design — test at 360 px breakpoint
- > Image compression pipeline: max 100 KB per image, WebP + fallback
- > Enable Brotli compression; set browser cache to 1 year for static assets

4 CONTENT PLAN

Pillar Pages (Evergreen, 2,000+ words each)

- > **Complete Guide to Linear Motion Systems** — covers rail types, selection criteria, maintenance, and application case studies
- > **Precision Gear Manufacturing: Materials, Methods & Applications** — gear types, cutting processes, material properties, industry applications
- > **Custom CNC Machining for Industrial Components** — tolerances, multi-axis capabilities, prototyping workflow, quality assurance

Blog Topics (Supporting Content)

TITLE	INTENT	TARGET KEYWORD CLUSTER
How to Choose the Right X-Y Rail System for Your Application	INFORMATIONAL	X-Y rail systems, linear motion selection
Spur Gears vs Helical Gears: Which Is Right for Your Project?	COMPARISON	spur gears, helical gears, gear types
5 Critical Factors in Cam Design for High-Speed Machinery	EDUCATIONAL	cam design, high-speed cam components
Understanding CNC Tolerances: A Guide for Engineers	INFORMATIONAL	CNC tolerances, machining precision
Reducing Lead Times in Custom Precision Manufacturing	COMMERCIAL	custom manufacturing lead times
Material Selection Guide for Precision Machined Components	EDUCATIONAL	material selection, machined components

5 BACKLINK STRATEGY

Industry Directories (DA 50+)

- › ThomasNet — create manufacturer profile with full product catalog
- › GlobalSpec — list all product lines with technical specifications
- › Kompass — register with SIC/NAICS codes for discoverability

Guest Content & Thought Leadership

- › Machine Design — pitch technical articles on linear motion innovation
- › Engineering.com — contribute to CNC machining resource library
- › Modern Machine Shop — case study on precision manufacturing process
- › Manufacturing Engineering (SME) — author feature on quality control

Partnership & Community Links

- › Supplier cross-links — reciprocal links with material & tooling vendors
- › Customer case studies — co-publish with OEM clients for mutual links
- › University engineering departments — sponsor capstone projects
- › Industry events — sponsor IMTS, Automate, FABTECH for event page links
- › Webinars — host technical webinars listed on engineering event aggregators

6 LOCAL SEO

Google Business Profile

- › Claim & verify GBP; select "Machine Shop" + "Manufacturer" categories
- › Upload facility photos, product images, and team photos monthly
- › Post weekly updates: new capabilities, certifications, projects completed
- › Enable messaging; respond to reviews within 24 hours
- › Embed Google Maps with schema-linked address on Contact page

Citations & Consistency

- › Ensure NAP (Name, Address, Phone) is identical across all 40+ directories
- › Priority citations: Yelp, BBB, Manta, Yellow Pages, Hotfrog
- › Industry-specific: ThomasNet, MFG.com, IndustryNet, MacRAE'S
- › Add `LocalBusiness` schema with geo-coordinates to every page footer
- › Build city + service landing pages (e.g., "Precision CNC Machining in [City]")

7 KPIS & 6-MONTH ROADMAP

+40% ORGANIC TRAFFIC GROWTH	Top 20 KEYWORD RANKINGS	5+ QUALITY BACKLINKS	+25% FORM SUBMISSIONS		
Month 1 Technical audit & crawl error fixes. Set up GA4, GSC & rank tracking. Benchmark current metrics.	Month 2 On-page optimization for all product pages. Implement structured data (Organization, Product, Local). Fix Core Web Vitals.	Month 3 Publish first pillar page. Launch bi-weekly blog cadence. Submit sitemap & request indexing.	Month 4 Directory submissions & link outreach campaign. GBP optimization & local citations setup. Begin guest post pitches.	Month 5 Publish second pillar page. Continue link building & guest posts. Optimize underperforming content based on data.	Month 6 Comprehensive KPI review. Publish third pillar page. Adjust keyword targets & content calendar for H2 2026.
